

## The Think Chair

### A chair made to be made again

*Source: Steelcase*

Have you ever thought about what happens to your furniture when it's broken? It probably ends up buried in the ground along with tonnes of other rubbish. But here is a chair that never becomes rubbish. Made of fabric, plastic and metals, the Think Chair is designed to be made again.

A broken arm can be replaced or changed for a new look. An old seat cover can be composted. When too old, the chair can be quickly taken apart with simple tools. The worn out parts can be refurbished or the materials can be recycled to make new stuff.

Who knows, there may be bits of old Think Chairs in your fridge, your washing machine or in your car! Think of all the stuff we use every single day that could be designed as cleverly as the Think Chair.
